

SHIFTWORK. × Opulent · build partnership

Build pipeline

Customer-led intake to first agent delivered. One illustration, then a step-by-step spec. Mark any step clear, or flag it unclear.

VERSION **0.1**

STATUS **DRAFT FOR REVIEW**

11 STEPS

OWNER SPLIT **SHIFTWORK / OPULENT**

FIG. 01 PIPELINE AT A GLANCE

■ PHASE A — SHIFTWORK INTAKE · CUSTOMER-LED, NO SALESPERSON

01

Visit ShiftWork site

Customer arrives on their own

02

Select use case and agent task

Picks what they want built

03

Enter contact details

Name, business, email

04

Pay \$29 application fee

Membership, triggers the handoff

HANDOFF Lead and form data pass to Opulent

05

Research agent

Person, business, industry, use case

06

Select questionnaire

One of five, chosen by use case

07

Create Q and A document

Draft answers from research

08

Prepare onboarding call script

Example answers to aid the owner

09

Onboarding call

VAPI agent or crew on Meet, recorded

10

Gap agents review

Find gaps, research, fill them

11

Build first agent

Owner's most critical problem first

IF ONE NEED

Single agent

One agent for the top problem

IF MANY NEEDS

Orchestrated agents

Manager agent plus task agents

SPEC STEP DETAIL AND VALIDATION

01 Visit ShiftWork site

SHIFTWORK

The customer arrives on their own. No salesperson is involved at any point. Traffic comes from ads, referral, or the network.

INPUT

Web visitor on the onboarding flow

OUTPUT

Active session, onboarding started

DONE WHEN The onboarding flow loads and is reachable from the homepage.

02 Select use case and agent task

SHIFTWORK

The customer picks the use case and the specific agent task they want built. These two choices drive the research and questionnaire downstream.

INPUT

Use-case menu, agent-task options

OUTPUT

Selected use case and agent task

DONE WHEN Both selections are saved on the lead record.

03 Enter contact details

SHIFTWORK

The customer enters their name, business name, and email. The business domain is read from the email or business name for research.

INPUT

Name, business name, email

OUTPUT

Contact and business identity, domain captured

DONE WHEN Required fields validate and the domain is captured.

04 Pay \$29 application fee

SHIFTWORK

The customer pays the \$29 membership application fee. Payment is the trigger that closes intake and fires the handoff to Opulent.

INPUT

Payment via Stripe

OUTPUT

Paid lead record, handoff event fired

DONE WHEN Payment confirms and the lead is pushed to the Opulent pipeline.

- Handoff

CONTRACT

The full lead record passes from ShiftWork to Opulent. Name, business, domain, use case, and agent task all travel with it. Opulent needs the form payload only. No GitHub or codebase access is required.

INPUT

Paid lead record

OUTPUT

Form payload delivered to Opulent intake

DONE WHEN Opulent confirms it receives every field needed to start research.

05 Research agent

OPULENT

The agent researches the person, the business, and the industry, then reads the chosen use case and agent task. It flags the real felt need when it differs from what the customer picked. This is the same move run by hand on the partner contact card, now automatic on every lead.

INPUT

Lead record: name, business, domain, use case, agent task

OUTPUT

Research brief, recommended questionnaire

DONE WHEN A brief exists covering business, industry, and likely core problem, with a questionnaire pick.

06 Select questionnaire

OPULENT

The agent selects one of five onboarding questionnaires based on the use case and the research brief. Each questionnaire runs about 25 to 30 questions.

INPUT

Research brief, the five questionnaire sets

OUTPUT

One selected questionnaire, with a reason

DONE WHEN A single questionnaire is chosen and the choice is logged with a reason.

07 Create Q and A document

OPULENT

The agent builds the Q and A document, seeding likely answers from research so the call moves fast. Open items are marked as gaps to confirm live.

INPUT

Selected questionnaire, research brief

OUTPUT

Draft Q and A training document

DONE WHEN Every question has a draft answer or a marked gap.

08 Prepare onboarding call script

OPULENT

The agent prepares the call script. The draft answers are examples to help the owner answer the questions. They are aids, not final answers, and must never be used as training input on their own.

INPUT

Q and A document

OUTPUT

Call script with example answers flagged as prompts

DONE WHEN The script is ready and example answers are clearly marked as aids.

09 Onboarding call

OPULENT

The call runs by a VAPI voice agent or a ShiftWork crew member who joins a Google Meet. The call is recorded. The owner's real answers fill the training document.

INPUT

Call script, owner availability

OUTPUT

Completed training document, call recording

DONE WHEN The owner's answers are captured in the document and the recording is saved.

10 Gap agents review

OPULENT

A group of agents critically assesses the completed document for gaps. They research and fill those gaps so the training document is whole before any build starts.

INPUT

Completed training document

OUTPUT

Validated, gap-filled training document

DONE WHEN No open gaps remain against the gap checklist.

11 Build first agent

OPULENT

The build targets the owner's most critical problem, their greatest felt need. If one agent covers it, ship one. If the job needs several, a manager agent orchestrates more detailed task agents.

INPUT

Validated training document

OUTPUT

Working first agent, single or orchestrated

DONE WHEN The agent runs against the owner's top problem and passes review.

LOCK THESE OPEN DECISIONS

Step 06

Questionnaire logic. How does the agent map a use case to one of five questionnaires? Define the rules so it is not a black box.

Step 08 **Example answers.** Confirm in writing that example answers are aids only and never training input on their own.

Step 09 **Call routing.** When is the call VAPI versus crew? Proposed: crew for the first 10 builds, VAPI once tuned.

Step 10 **Gap definition.** What counts as a gap? Give the agents a checklist so the bar is the same on every build.

Step 11 **Scope decider.** Who decides single versus orchestrated, the agent or a human gate before the build starts?

Money **The \$29 fee.** Is it a credit toward the build, or separate from build pricing?
